

We don't simply “work with Teams.” We live in Teams. Your staff keeps their existing number, sends compliant texts from the same workspace, and IT gets central control, SSO, permissions, and archives, all without duct-taping apps together.

What Microsoft valued:

- Privacy-first design (“zero spam, 100% permissioned”).
- Enterprise-grade governance (roles, audit trails).
- Real-world rollout speed (days, not months).

Microsoft values the straightforward approach of partners who build native Teams implementations.
